MAG933 - MAGPUL BIPOD FOR M-LOK

MAG941 - MAGPUL BIPOD FOR 1913 PICATINNY RAIL

MAG951 - MAGPUL BIPOD FOR A.R.M.S. 17S STYLE

The Magpul Bipod is designed as the most durable and versatile bipod for the money. Rich with important features, our lightweight Mil-spec hard anodized 6061 T-6 aluminum and injection-molded polymer bipod brings innovation in ergonomics, functionality, strength and value together. An aesthetically pleasing, low-profile design conceals its mechanisms and hardware, smoothly brushing off snags and bumps. Optimized for rapid one-handed adjustments, the bipod quickly and quietly transitions between countless user configurations. The Magpul Bipod includes many features normally found on bipods at a significantly higher cost.

Durable & Lightweight

The Magpul Bipod is exceptionally strong and built to perform under punishing field conditions. Like all Magpul products, the Bipod is constructed of rugged, high-strength materials and designed to last a lifetime. In the shooting position, it is easily loaded with stabilizing forward tension without fear of failure or warping. Mil-spec hard anodized 6061 T-6 aluminum, stainless steel internals, and injectionmolded reinforced polymer ensure years of dependable performance and reliability, all while shaving weight. At just over 11 oz., the Magpul Bipod is lighter than many pricier bipods currently on the market.

Innovative, Adjustable, & Easy to Use

Deploying and adjusting the Magpul Bipod is quick and easy. Springtensioned legs stow neatly forward and snap down and lock into place with one hand. Leg extensions slide and lock securely with the push of a button on any of the seven half-inch spaced locking detents. The legs extend a full four inches, from 6.3" to 10.3", which is over an inch taller than many other bipods. An industry-exclusive 50° of total tilt and 40° of total pan are controlled by a glove-friendly knurled toolless bipod locking knob located between the extended legs, allowing easy adjustment between shots. Additionally, the Magpul Bipod has the exclusive ability to lock pan at 0°, while maintaining full tilt functionality.

Smooth & Unobtrusive

From the drawing board, the Magpul Bipod was designed to be barely noticed until needed. Folded, the streamlined housing and legs fit neatly under the barrel and are just under 2.3" deep and 3.3" wide. In addition, anodized surfaces and tight, precision tolerances mitigate squeaks and rattles.

Functional

The Magpul Bipod has many features that are also useful even when it is in the stowed position. A soft rubber bipod locking knob cap is attached to the bipod locking knob gives users a steady, non-marring forward rest while the bipod is folded. Additionally, its staggered soft rubber feet hold fast on a variety of shooting surfaces and are easily removed with a roll pin punch. Should users choose to change feet, the Magpul Bipod's legs accept all Atlas pattern bipod replaceable feet.

The Magpul Bipod is available in three popular mounting platforms: M-LOK (MAG933), 1913 Picatinny Rail (MAG941), and A.R.M.S. 17S Style (MAG951), and is available in BLK or FDE colors. The Bipod for A.R.M.S. 17S Style must be used in conjunction with an appropriate 17S-style mounting device that is purchased separately and typically is quick-detach capable, for proper mounting to your weapon system of choice.
